

1. The turbo® III Precleaner has specially designed blades that cause the incoming air to spin.

2. As air spins, centrifugal force spins dust, dirt, insects, rain and snow from clean air.

3. Contaminants are blown out special discharge ports by a high-velocity air powered rotor.

4. Only the purified air goes to the air filter

turbo® III Precleaner models and sizes

Model #	Inlet Size Base		Airflow Low Range	
	Inches	mm	CFM	m ³ /min
